NEWS RELEASE

Drilling at Trun Expands Gold Zone at Logo and K2 Targets

VANCOUVER CANADA: EurOmax Resources Limited (TSX-V: EOX) (“EurOmax”) announces that recent drillhole results have extended the mineralized zone on the Logo and K2 targets at Trun. The drilling at Trun in 2010 was conducted to assist in prioritizing further exploration on the EurOmax’s properties after an independent review. The drilling totaled 1,989 metres. The results include 54 metres at 1.15 grams per tonne gold and 0.05% tungsten; 20 metres at 1.45 grams per tonne gold and 0.08 % tungsten and 50 metres at 0.94 grams per tonne gold.

The gold mineralization at Trun indicates the potential for Intrusion Related Gold (“IRG”) deposits. A number of IRG deposits have been found in Europe and Asia with similar geological age and setting to Trun including Vasilkovskoe in Kazakhstan, Mokrsko in the Czech Republic and Jilau in Tajikistan. A belt of IRG deposits is located in Alaska where the Fort Knox, Dublin Gulch, Pogo and Donlin Creek deposits are located in the Tintina Gold Belt.

“We are highly encouraged with the results from this recent drill campaign. The current drilling has confirmed the potential for bulk tonnage IRG deposits on the Trun property.” said Dimitar Dimitrov, Senior Vice President of Euromax. “All of the targets drilled are still open for expansion. In addition there are a number of other similar targets which have not yet been drilled.”

The Logo target has been traced over an area 1,200 metres long by 300 metres wide. The mineralization is a stacked series of sheeted gently dipping zones in hornfels on the edge of the granite intrusion. The drilling approximates the true thickness of the mineralized zone

Results from the Logo target are summarized in the table below:

LOGO DRILL RESULTS

DDH Number	Total Depth (m)	From (m)	To (m)	Length (m)	Gold (g/t)	Tungsten (%)
MTC 1060	399	78	230	152	0.69	n/a
including		163	217	54	1.15	0.05
MTC 1064	247	3	27	24	0.26	n/a
including		55	163	108	0.64	0.07
		111	158	47	0.93	0.07
MTC 1067	201	77	97	20	1.45	0.08
including		78	90	12	2.79	0.08

The K2 target has been traced over a length of 600 metres by 150 metres wide. The mineralization is a stacked series of sheeted gently dipping zones in granite at the edge of the granite intrusion. The drilling approximates the true thickness of the mineralized zones.

K2 DRILL RESULTS

DDH Number	Total Depth (m)	From (m)	To (m)	Length (m)	Gold (g/t)	Tungsten (%)
MTC 1058	145	-	99	99	0.49	n/a
including		79	99	20	0.90	n/a
MTC 1059	188	80	91	11	0.62	n/a
MTC161	117	9	43	34	0.28	0.04
including		20	34	14	ancient workings	
MTC 1062	212	0	50	20	0.94	n/a
including		6	13	7	ancient workings	
including		25	37	12	2.8	n/a
MTC1063	212	133	147	14	1.01	n/a
		166	191	25	0.34	n/a
MTC 1065	212	115	128	13	0.42	n/a
		175	197	22	0.43	n/a
MTC 1066	120		no significant intercepts			
MTC 1068	148		no significant intercepts			

Quality control and Quality Assurance

Drilling was conducted using diamond drilling. Diamond drillhole samples were cut at a sample preparation facility in Bulgaria by EurOmax personnel. Drillhole samples were prepared and assayed by SGS Chelopech at its laboratory in Bulgaria. SGS Chelopech follows SGS Global methods and procedures and has stringent quality control and assurance practices. Quality control samples, both standards and blanks, are routinely submitted. Gold is assayed by a 50 gram fire assay with an AAS finish. Tungsten is assayed as part of the standard 35 element ICP package.

Drillhole location maps are available on the EurOmax website at www.euromaxresources.com
